## Learning About The Keypad

### **Gold Plane Keys**

The Gold  $\bigcirc$  plane keys provide you access to display controls, special characters, and Windows Mobile 2003 options.

Press the gold  $\bigcirc$  key for each gold plane key stroke you wish to make. For example to turn on the front light, press and hold the gold  $\bigcirc$  key plus the  $\Im$ key. To turn the front light off press and hold the gold and the  $\Im$  key again.

## Alpha (Blue) Plane Keys-Numeric Keypad

The Alpha (Blue)  $\implies$  plane keys work a bit differently than the gold plane keys. When you press the Alpha key, the Imager/Alpha  $\sqrt[n]{O}$  LED lights 'red' to indicate Alpha mode. The keypad stays in the Alpha mode until you press it again.

For example, pressing the Alpha  $\iff$  key and the  $\underbrace{1_{see}}^{res}$  key allows the next letter to be capitalized. Again it stays in this mode until you press the Alpha key again.

Another example of how this works, if you want to type a 'c' press the key and the key three times. If you need a letter that is on the same key as the last letter entered, wait two seconds after you pressed the last key then you can enter the correct series of keystrokes to create the next letter.

## Linear Imager/Keypad Shift and Notification LED

The Linear Imager/Keypad Shift and Notification LED  $\checkmark \odot$  turns red, green, or yellow.

- Momentary Green: Indicates a 'good scan'.
- Blinking Green: Indicates that the imager is initializing.
- Steady Red: Indicates the keypad is shifted to the Alpha (Blue) plane and the Model 730 is On.

• Yellow: When keypad is in alpha mode, the LED momentarily changes from red to yellow indicating a 'good scan'.

This LED is also the Windows Mobile 2003 Notification signal. It blinks yellow at regular intervals indicating a Calendar or Task activity occurred.

### Action and Up/Down Navigational Buttons

- Action button: Press to open an item (similar to pressing ENTER on the keypad).
- Up/Down controls: Press to scroll through a list (similar to pressing the arrow keys on a keyboard).

### **Battery Status LED**

Power to run your Model 730 is supplied by a powerful Li-Ion battery pack designed to give you approximately 6-10 hours of operation (depending on application). In addition, your Model 730 contains backup capabilities to prevent loss of data when the main battery is discharged or when switching out battery packs.

For maximum effectiveness it is important to leave the main battery installed in your Model 730 even if it is discharged. If the main battery is removed, it should be replaced within 10 minutes to avoid the possibility of data loss.

The Battery status LED  $\bigcirc$   $\square$  turns red, green, or yellow.

- Steady Green: Battery is more than 95% charged and unit is on a charger.
- Blinking Red: Battery is low. The speed of the blinking increases as the battery's power gets increasingly lower.
- Red: Main battery is low, or if charging, will remain red until your Model 730 reaches 95% charge status.

Model 730 Color Mobile Computer

- Yellow: Your Model 730 is on a charging source and there is no battery pack installed. Can also mean that your Model 730 is out of charging range 32° to 122°F (0° to 50°C). Once your Model 730 gets back in range, charging resumes and the LED changes to red or green.
- Alternating between Red and Yellow: The battery pack needs to be replaced.

• Press and hold the *v* key for about 10 seconds.

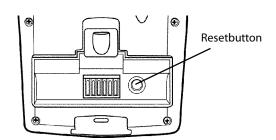

Model 730 Color Mobile Computer

## **Cold Resetting Your Model 730**

In some cases where the Model 730 completely stops responding, it may become necessary to perform a Cold Reset. Because cold resetting may result in data loss, it is not recommended unless all other recovery methods have failed.

Cold booting deletes all programs and data stored in RAM including the Object Store. Ensure that data is backed up to the Host PC or a Storage Card before cold booting.

- 1 Release the lower clip of the hand strap.
- **2** Remove the battery pack.
- **3** Press the Reset button.

4 Reinstall the battery pack.

## Troubleshooting

#### Model 730 takes a long time to boot up after a reset

Normal time is between 30-45 seconds. If it takes longer than this, contact support personnel.

## **Cleaning Your Model 730**

Periodic cleaning helps maintain the appearance of your Model 730. When cleaning your Model 730, inspect the keyboard, covers, display, and connectors for obvious signs of damage or wear.

Note: Do not use abrasive cleaning compounds, alkaline compounds, ketonic solvents (acetone or ketone) or aromatic solvents (toluene or xylene) to clean any part of your Model 730. These solutions cause permanent damage.

Note: Never pour cleaners directly on the display or the case. Instead put the cleanser on a soft cloth and gently wipe the case.

#### **Case and Display**

We recommend cleaning the exterior of your mobile computer using a soft cloth dampened with MICRO-

CLEAN II cleanser, made by Foresight International, Inc. 4887 F Street, Omaha, NE 68127-0205 (phone: 1-800-637-1344).
